Arch Top Sunburst Grids

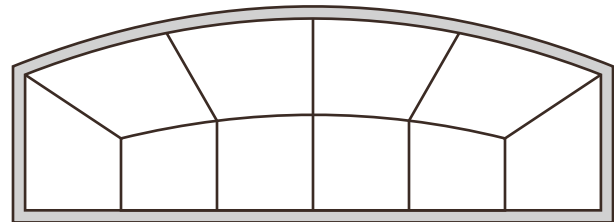

2V

3V

4V

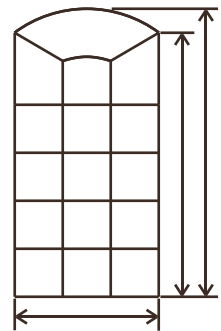

5V

When ordering, please provide the dimensions shown on the drawing to the right.

To add colonial grids to these patterns:
Specify how many horizontal and vertical bars
are in the grid.

For example, the grid to the right has 4 horizontal and 2 vertical bars so it would be ordered as a 2V Arch Top Sunburst with 4H2V.

Special Circle Top Grids

For the look of a circle top in square or rectangular glass

The minimum circle diameter is 6 5/8" in flat muntin and 10" in contour.

All circles must be true half circles (the height must be one half of the width).

We can not make grids where the height of the curve is greater than one half of the width.

If the height of the sash is greater than one half of the width, the grid must have horizontal and vertical bars like the grid pictured below.

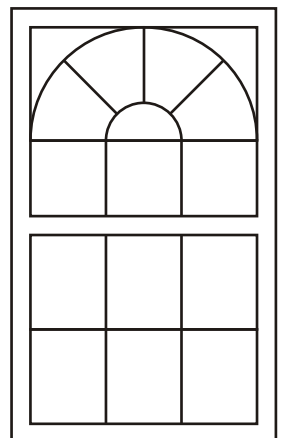

If a grid must have a curve where the height is less than one half of the width, we will look at each order on an individual basis in order to determine if we can fabricate it and if additional charges will apply.

To add colonial grids to these patterns:
Specify how many horizontal and vertical bars
are in the grid

For example:

The double hung window at the right has a 7 lite with 1H2V in the top sash (count the bar directly under the circle top as one of the horizontal bars) and a 1h2v colonial grid in the bottom sash.

This would be ordered as two separate grids. A 7 lite Special Circle Top with 1h2v for the top sash and a 1h2v colonial grid for the bottom sash.
